FINAL REPORT

The **Research Instrumentation for DoD Research** grant awarded to the Computer Science Department of North Carolina A&T State University has been instrumental in establishing the infrastructure of the department's research capability. Through the funds provided by this grant, the department has been able to:

- Place a workstation and printer on the desk of every researcher in the department.
- Create two computer laboratories for use by Computer Science graduate students.
- Supply workstations for use by graduate researchers.
- Supply laboratory furniture.
- Install file and print servers for use by all researchers.
- Install the necessary software to support a research computing environment.

With these facilities in place, the department has been able to perform work in software engineering, artificial intelligence, computer networking and communication, parallel and distributed computation, computer-human interaction, and operating systems; on projects of interest to the Department of Defense. Additionally, the development of the researching infrastructure has allowed the researchers within the department to expand their ability and seek additional research funding. Researchers in the Computer Science Department have received numerous research grants in excess of \$5,000,000 from agencies of the Department of Defense, other federal agencies and industry. The equipment provided by the Research Instrumentation grant continues to provide the department with the ability to perform further research and seek continued funding. For a listing of all items of equipment actually acquired by name, manufacturer, cost, and description; please see attachment.
